The Practical Use of Corticosteroids in the Treatment of Inflammatory Bowel Disease

by Jeffry A. Katz
Corticosteroids, both topical, oral and intravenous are the mainstay in the treatment of IBD. However, the benefits of corticosteroid therapy are counterbalanced by many side effects. Dr. Katz’s article discusses the practical use of conventional and novel corticosteroids in the management of IBD.

Much Ado About Refeeding

by Stacey McCray, Sherrie Walker and Carol Rees Parrish
Refeeding syndrome is a series of metabolic events precipitated by the provision of nutrients, primarily carbohydrate, to a patient in a nutritionally compromised state. In their article, the authors discuss the pathophysiology behind refeeding syndrome. They identify patients who are at greatest risk and provide practical information for prevention and treatment.
